PROJECTS

MedQube – Smart Doctor Availability & Appointment System

Feb 2026 – Apr 2026

React.js, JavaScript, HTML5, CSS3, Node.js, REST API, Flutter

Developed a responsive doctor appointment and availability management interface using React.js, built reusable UI components, and integrated REST APIs to display doctor and appointment data. Implemented features such as doctor availability status, appointment scheduling, and a dashboard for viewing and managing appointments while ensuring seamless communication with the Node.js backend.

Flowx – Smart Water Issue Reporting & Mapping System

Oct 2025 – Jan 2026

React.js, JavaScript, HTML5, CSS3, Interactive Maps, Open-Source Geospatial Data

Developed a responsive map-based interface using React.js to visualize and report community water issues. Implemented features such as location markers, issue submission, and category-based filtering to improve accessibility and user experience, while integrating open-source geospatial data for map visualization.

BioSky – Molecular Biology Analysis Toolkit

Jan 2023 – Apr 2023

HTML5, CSS3, JavaScript

Independently developed a web-based tool with a clean and responsive interface for molecular biology analysis. Implemented features such as DNA melting temperature estimation, molecular weight calculation, and cell seeding analysis to simplify routine laboratory computations.
